

## Other Uses for Our Innovative Target:

Our A-DAP system is easily one of our most popular targets. Its audible feedback and durability are second to none. It is truly an exceptional system. The hostage assembly further creates a truly dynamic system that will help further your training.

The Hostage Assembly can be used to further hone in your accuracy while building speed. One of our favorite drills are reload drills using the small paddle. It stresses getting the hits and keeps you from getting “lazy” and throwing shots. Give it a try!

## Basic Target Guidelines:

-PLEASE FOLLOW all instructions that were included with your A-DAP system!

-The standard paddles are made from 3/8” AR550 steel and are identical to our Rifle Dueling Tree and are interchangeable between the two systems. All paddles may be shot at 10 yards with pistols. Reduced pistol paddle is rated for light .223/5.56 at 50 yards, the 556 paddles are designed for high volume 556, and our 308 paddles are recommended for 308 at 100 yards and are designed for serious use.

-Please adhere to safe shooting distances listed on the stickers on your A-DAP system! If you own a 3/8” AR500 A-DAP, you must adhere always to 100 yards minimum even if the paddle is rated for closer distances. **Always follow the further of the two distances if your paddle and silhouette are different materials.**

- Pistols may be used on paddles at 10 yards. Reduced pistol paddle is rated for light 556 use and can be used at 50 yards with 556. The dedicated 556 paddle is meant for high volume 556 at 50+ yards. The 308 paddle is dedicated to 308 and is rated for 50+ yards. We also offer 3/16” AR400 paddles for 22LR. Find them on our site. These can be used with 22LR handguns or rifles at 10 yards+.

-DO NOT USE STEEL CORE AMMO OR AMOR PIERCING AMMO ON STEEL TARGETS EVER!

**-ALWAYS WEAR APPROVED EYE AND EAR PROTECTION WHENEVER ENJOYING SHOOTING SPORTS!**

**-Please read our separate safe shooting pamphlet included with this packaging. It outlines basic range safety and safe shooting practices. Please consult with trained professionals BEFORE partaking in ANY range shooting!**

SAFELY USING YOUR STEEL  
TARGET SYSTEM

## A-DAP HOSTAGE ASSEMBLY

Congratulations and thank you for your purchase of one of our high-quality steel target systems! We are pleased to offer you our innovative targets to help further your training and shooting goals. Whether for tactical drills, scenario training, competition drills, or just fun recreation, our steel targets will help make your experience that much more enjoyable. Please read the simple yet important instructions below to ensure your experience is as safe and enjoyable as possible

### Key points of your Hostage Assembly

The hostage assembly for our A-DAP lineup of targets is an exciting evolution of the A-DAP system. There are (4) bolts that simply bolt the new gusset and paddle bracket around your existing A-DAP top bracket. A few things to not: First generation A-DAP top brackets featured 6 holes and the holes were about 1/4" in diameter. For these brackets use the included 3/16" bolts. For all Gen 2 Brackets (ones with four holes) use the included 1/4" Bolts and nuts. This attachment adds versatility to you're A-DAP system and helps keep your range days exciting. Note: This bracket requires basic hand tools to install.

## What is included in the box:

You should already have an A-DAP System with plate, top bracket (below) and base. Note the gen 1 brackets have 6 holes and the Gen 2 brackets have 4 holes.

-(4) 3/16" bolts and (4) 1/4" Bolts. As stated before, use the bolts that fit your A-DAP top bracket.

-We offer this system standard with our Reduced Pistol and 556 paddle:

-Note: Other paddle options and sizes can be found on our site under "replacement parts". The paddles for this system are the same as our rifle Dueling Tree.

## Assembly Pictures:

Assembly of the bracket takes only minutes. Simply remove your A-DAP bracket from your current target. The gussets will slide around the bracket as shown above. Slide the four bolts through the holes and ensure that you have the lock nuts fastened very tight so they do not come loose during use. The above picture shows the bracket assembled.

The Paddle simply drops into the gussets on the hostage bracket assembly. There is a special slot in the center of the arc that allows the paddles to slid in and effectively lock into place. This ensures they do not jump out during use.
